

# AMS NanoPro™ Solvent Elements

## Solvent Stable Nanofiltration Spiral Wound Elements

<b>Description</b>	The AMS NanoPro™ membrane is developed for long-term performance with high and stable fluxes in presence of solvents, featuring high pressure and temperature compatibility. The hydrophilic NanoPro™ S Series solvent-resistant membranes are suitable for non-pure solvent solutions. They are used for the purification and concentration of components in solvent-water solutions. Typical solvents include:				
	<ul style="list-style-type: none"> <li>• Methanol, Ethanol, Propanol</li> <li>• Acetone, Acetonitrile</li> </ul>		<ul style="list-style-type: none"> <li>• Hexane</li> <li>• Ethyl acetate</li> </ul>		<ul style="list-style-type: none"> <li>• THF</li> <li>• DMF</li> </ul>

<sup>[1]</sup> Test condition:

a. 2000ppm MgSO<sub>4</sub> solution, 225psi (15.5bar), 86°F (30°C), pH 7.0.

b. Permeate flow for individual elements may vary ± 20%.

<sup>[2]</sup> Test condition: 5% Glucose solution, 225psi (15.5bar), 86°F (30°C), pH 7.0.

<sup>[3]</sup> For the purpose of improvement, specifications may be updated periodically.

<sup>[4]</sup> Consult UNISOL Membrane Technology when intend to operate at elevated pressure, temperature, concentrations.

<sup>[5]</sup> Stabilized salt rejection is generally achieved within 24 – 48 hours of continuous use, depending upon feed water characteristics and operating conditions.

## Handling

**Chemical Exposure.** Do not expose the membrane to chlorine or other oxidants. Sodium metabisulfite (without catalysts such as cobalt) is the preferred chemical to eliminate free chlorine or other oxidizers in the feed.

\* **NB:** Please do not use tap water while testing or cleaning the module since the residual chlorine contained in the tap water could negatively affect the membrane performance.

**Recommended Cleaning Materials.** Depending on the nature of the feed material, a choice can be made among the following cleaning agents:

- Sodium hydroxide at pH 10 – 12, temperature ≤ 40 °C (104 °F);
- Hydrochloric acid at pH 1 – 2, temperature ≤ 40 °C (104 °F);
- Nitric acid at pH 1 – 2, temperature ≤ 40 °C (104 °F);
- Na-EDTA of 0.2 – 1.0 % w/w at pH 10.5 – 11, temperature ≤ 35 °C (91 °F);
- Anionic surfactant (e.g. sodium dodecyl sulfate) of 0.5 % at pH 10.5 – 11, temperature ≤ 35 °C (91 °F).

Only demineralized (RO) water must be used for cleaning. **Please flush the module by permeate after processing.** Consult UNISOL Membrane Technology regarding the use of other cleaning materials.

**Lubricants.** During installation, use only water or glycerin to lubricate seals. The use of petroleum or vegetable-based oils or solvents may damage the element and void any warranty.

**Preservation and Storage.** Plan ahead to use new membranes. The element should not be allowed to dry: store it in a sealed bag, at 4 – 30 °C (39 – 86 °F). Storage solutions should be made with: 1.5 % w/w sodium metabisulfite. Please refer to “UNISOL Membrane Element Storage and Handling Instructions.”
